

## Hsa-miR-199b-5p Probe (cy3 fluorophore)

**Catalog No.** FM199b-5p-C3-25

**Description:** one vial of 0.3 mL of probe in hybridization buffer

### Intended Use:

This probe is intended for research use only. **Not to be used for diagnostic procedures.**

### Principle:

MicroRNAs (miRNAs) are endogenous, non-coding small RNA molecules that play important role in controlling gene expression. They are involved in multiple biological functions and disease progression including cancer. miRNAs either act as tumor suppressors or oncogenes depending on function of their target gene. Aberrant expression of miRNA has been reported in different cancer types; hence, *in situ* detection of miRNA provides important insight for diagnosis, prognosis, and disease management. Hsa-miR-199b-5p overexpression was shown to reduce angiogenesis, tumor growth, migration, and invasion in breast cancer cells. In contrast, its expression was upregulated in gastric cancer cell lines and patient's plasma and associated with poor prognosis. These contrasting roles of Hsa-miR-199b-5p suggest the need for further research on this miRNA to explore its utility in cancer therapy.

### Summary and Explanation

miRNAs play an important role in many biological processes, including differentiation and development, cell signaling, and response to infection. Recent research have shown that human miRNA genes are frequently located in cancer-associated genomic regions, while perturbed miRNA expression patterns have been observed in many human cancers. A number of oncogenes and tumor suppressor genes were found to be the targets of miRNAs and global miRNA expression signatures were able to distinguish cancerous and non-cancerous tissues. Therefore, miRNA profiles can serve as highly specific markers for diagnosis, prognosis, disease monitoring, as well as prediction of therapeutic response. miRNAs are remarkably stable molecules and are well preserved in formalin-fixed, paraffin-embedded (FFPE) as well as frozen specimens. Early diagnosis, detection, and assessment of the disease progression are essential for disease management, especially in tumor patients, where timely therapeutic interventions are extremely critical.

### Quality Control

This product is quality control tested at BioGenex. The recommended positive control tissue(s) for this miRNA probe is gastric ca.

### Recommended protocol and parameters for Hsa-miR-199b-5p probe

	Temperature Limitation		For Research Use Only
	Use By Date		Batch Code
	Non-Sterile		Consult Instructions for Use
	Catalogue Number		<b>BioGenex</b>

#### Distributed by: **OmicsVeu**

Omicsveu is a distributor company offering the true spatial multi-omics platform & reagents.

**Address:** 48810 Kato Road, Suite 100E & 200E

Fremont, CA 94538, USA
